

# How to Create Kids' Magic and Triple Your Income! by John Breeds

Wayne Kawamoto  
<http://magic.about.com/>

**H**ave you prepared your routines and now feel ready to entertain kids at parties and other functions? And, in particular, do you want to make money at it?

For this, John Breeds' "How to Create Kids' Magic and Triple Your Income" £25 or about \$40.00, direct from [www.johnbreeds.com](http://www.johnbreeds.com) is must reading.

Within its 200 pages, you'll discover a powerful and informative overview about performing magic for children as well as handling the business end.

## Show "Business"

The first chapters are devoted to business. Here, Breeds talks about working phones, promotional devices to promote shows, advertising and more. It's one of the strongest treatments of the topic that I've seen and the information is spot on.

Other chapters discuss sound systems, microphones, backdrops, lighting and magic tables. And then, there are the magic routines - a lot of kid-worthy magic effects and routines that you can add to your show.

I particularly liked John Breeds' invention, "Visible Magic Painting" prop and his routine. And because Breeds is a British magician, he also includes games, which are often a part of entertaining at kids' parties in the UK.

## Kids' Magic

As I read the book, I found myself constantly agreeing. And I gleaned a few ideas that I may put to use. Keep in mind that when it comes to business advice, there's lots of work involved on your part to make the venture a success. The book provides great business information, but if you're looking for a magical silver bullet, you won't find it here or any place else.

I also enjoyed reading the creative and entertaining routines. If you're ramping up to be a part of the kids' entertainment business, you'll find that John Breeds' book can give you a running start. And experienced performers may learn a thing or two as well.
